

Mohamed Marwen Maalawi

Senior Full-Stack Software Engineer

mohamedmarwen.maalawi@gmail.com • Tunis, Tunisia • github.com/marwenmaalawi • linkedin.com/in/mohamed-marwen-maalawi

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with a track record of architecting, building and shipping production-grade platforms from zero to scale. I own the full technical lifecycle — from system design and data modeling through API architecture, CI/CD pipelines and production monitoring. Core expertise in NestJS, Spring Boot, Next.js and React Native. Proven ability to lead technical decisions on distributed systems, financial integrations (Stripe, QuickBooks), workflow engines (Camunda BPM) and AI-powered features. I build systems designed to scale without architectural rewrites, and I deliver with full autonomy in fast-paced, international engineering teams.

PROFESSIONAL EXPERIENCE

NUMERYX TUNISIA

June 2025 – Present

Software Engineer

- Architected and implemented Spring Boot microservices handling distributed business workflows with fault-tolerant inter-service communication
- Designed and deployed Camunda BPM process definitions for multi-step business automation, reducing manual coordination overhead by an order of magnitude
- Engineered a GraalVM-based polyglot script execution sandbox, enabling dynamic runtime script evaluation within workflow tasks without JVM restarts
- Built production-hardened error recovery mechanisms — circuit breakers, retry policies and dead-letter queues — ensuring zero silent failures in critical business flows

Technologies: Spring Boot • Java • Camunda BPM • GraalVM • Keycloak • Docker • Microservices

LUDDITECH INC

January 2023 – April 2025

Full-Stack Engineer

- Owned the full-stack architecture of multiple SaaS products and React Native mobile applications serving international B2B clients across North America
- Designed and built real-time communication infrastructure — WebSocket-based chat, presence systems and cross-platform push notification pipelines via Firebase and APNs
- Architected a comprehensive Stripe integration: subscription lifecycle management, idempotent webhook processing, automated dunning flows, billing portal and complete audit logging — zero billing incidents post-launch
- Engineered a bi-directional QuickBooks sync engine with conflict resolution, exponential backoff retry, dead-letter queues and automated reconciliation — eliminating 100% of manual accounting effort

Technologies: NestJS • React Native • Angular • Stripe • QuickBooks • Docker • GitHub Actions • CI/CD

Technical Lead & Full-Stack Architect

- Led end-to-end product architecture and development for clients in e-commerce, logistics and fintech — from initial technical scoping to production launch
- Designed NestJS backend architectures with PostgreSQL, implementing domain-driven design, modular service boundaries and scalable REST/GraphQL API layers
- Built production Next.js frontends with ISR, server components, optimized Core Web Vitals and comprehensive SEO strategies
- Delivered cross-platform React Native mobile applications with offline-first architecture, push notifications and native module integration

Technologies: NestJS • Next.js • React • React Native • PostgreSQL • Docker • TypeScript

TECHNICAL SKILLS

BACKEND & ARCHITECTURE

NestJS • Spring Boot • Node.js • Java • TypeScript

DATABASES

PostgreSQL • MySQL • MongoDB • NoSQL • Redis

TOOLS & METHODOLOGIES

Stripe • QuickBooks • Keycloak • Camunda BPM • GraalVM • Meta Pixel • Google Analytics

FRONTEND & MOBILE

Next.js • React • Angular • TypeScript • TailwindCSS • React Native • Expo

CLOUD & DEVOPS

Docker • GitHub Actions • CI/CD • Vercel
